

COP31

Build for 2035 · Climate Awareness & Education

DRAKI

Flood warnings for **every paddock**,
on any farm, anywhere.

Team Pixelers · Peter Ma · Siddhant Malik · Adin Sreekesh · Australia

climate-tion.vercel.app

The problem · 28 February 2022 · Lismore, NSW

14.4 m

The river at Lismore, **two metres above** the 1954 record of 12.27 m. Thousands of homes and farms went under.

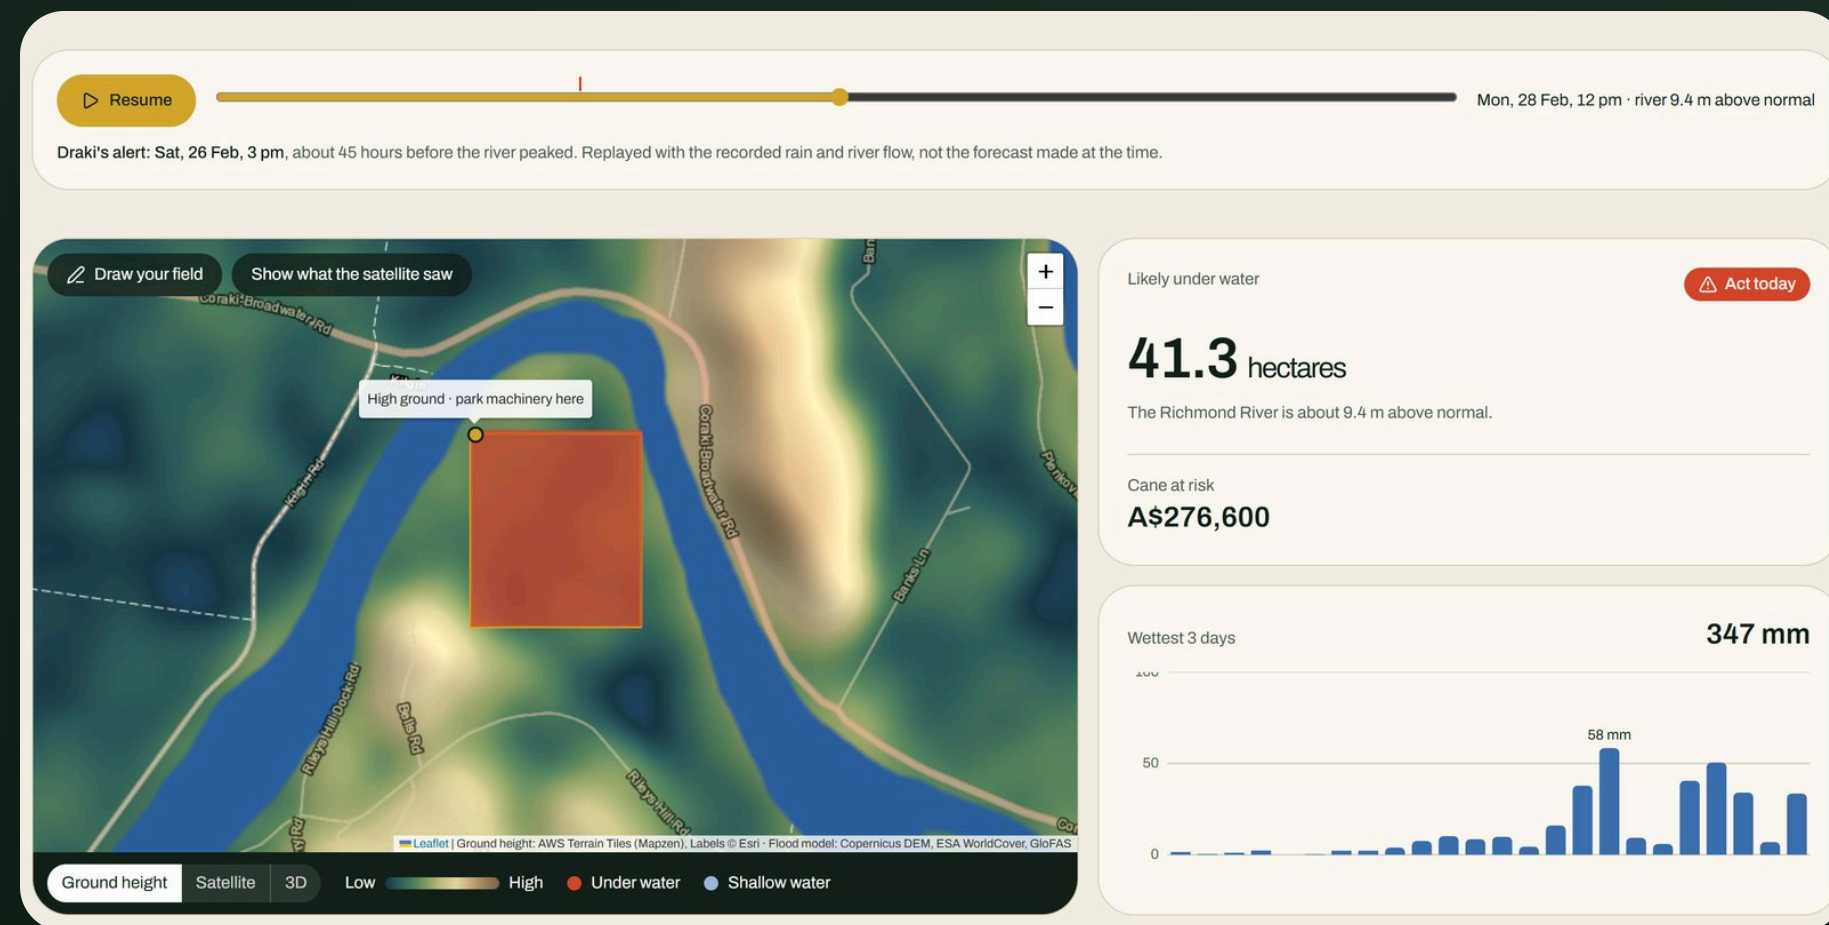

**FLOOD
WARNINGS
COVER
DISTRICTS.
FLOODS HIT
PADDOCKS.**

A valley-wide warning can't tell a farmer that **the bottom of their block goes under first**.

Broadwater sugar mill under ~3 m of water. Northern Rivers cane crush **down 17%**.

Very heavy rain days at Woodburn have **nearly tripled**: 0.9 a year in the 1990s, 2.6 in 2016–25.

What Draki does

WHICH PART OF THE FARM GOES UNDER FIRST?

Every 30 m square of the farm, checked against Europe's Copernicus river forecast (50 runs) and rain pooling in low spots.

Act today came 45 hours before the 2022 peak, in the hour-by-hour replay.

A text on any phone: what floods, what to move, and one line on why heavy rain is getting more common.

My farm · set up once, by the farmer or a cane adviser

This is an **example farm**: 40 ha near Broadwater, NSW, shown in a flood like February 2022. Switch to **This week** for the live forecast, or scroll down for the texts, your climate and the flood record.

What would a flood do to your farm?

This week

A common flood

A flood like 2022

3 paddocks under water, 4 things to prepare, A\$139,300 of crops

Before the water comes

Machinery and stock

Move anything in your sugarcane paddock, soybeans paddock and pasture paddock to higher ground off the floodplain.

Water pump

unplug it and lift the motor if you can

floods · 2 m+

Fuel tank

tie it down so it can't float off

floods · 2 m+

Fertiliser & chemicals

lift it off the floor or move it to higher ground

floods · 2 m+

Shed

lift what's inside off the floor

floods · 2 m+

WHAT A FLOOD WOULD DO TO YOUR FARM

This week, a common flood, or another 2022: **which paddocks go under, in ha and A\$.**

Where to move machinery and stock, and **what to tie down** (NSW SES advice, never AI).

Harvest timing, your local climate, fuel vs a solar pump, and a **printable flood record** for grants and insurance.

Live: climate-tion.vercel.app/#/farm?example

Does it work?

72%

overlap with the Sentinel-1 radar flood map, 2 March 2022
(critical success index, tuned on this flood)

54%

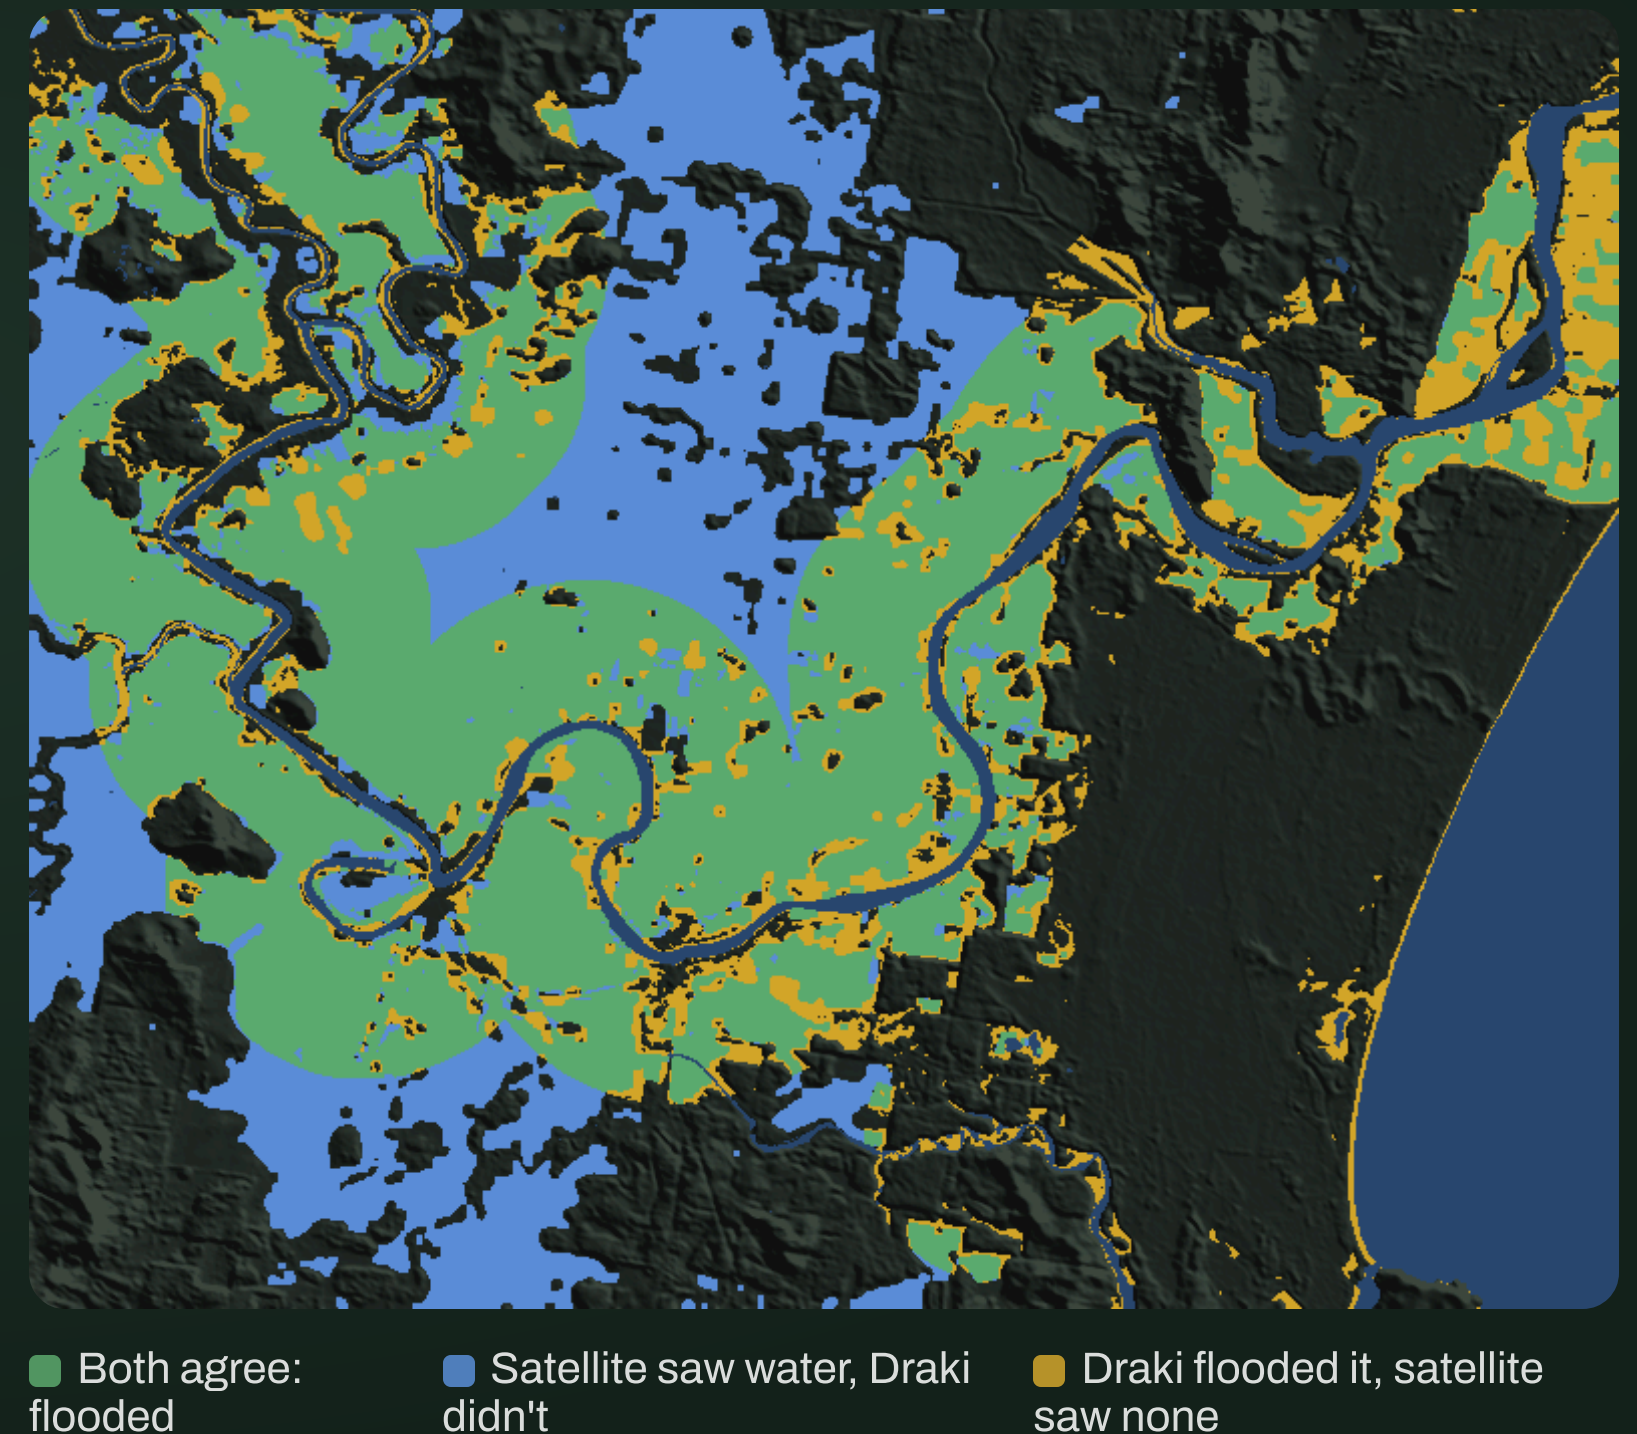

blind test on the second 2022 flood, a radar pass the model never saw. It leans towards warning too much.

6 of 6

recorded floods since 2009 trigger "Act today". Every Act-level peak since 2009 matches a real flood.

45 h

from Draki's first alert to the 2022 river peak (recorded data, replayed hour by hour)

COP31 Climate Awareness & Education

2035 TARGET: CLIMATE EDUCATION FOR ALL, AND CLIMATE-RESILIENT FARMING.

Delivery

COP31 is about delivery. Draki turns the target into actions a farmer takes this week: move the gear, tie down the tank.

Education

Every warning explains why heavy rain keeps getting more common here, where a farmer will actually read it.

Reach

Built only on free EU Copernicus data, so the method runs on any farm, anywhere. Pacific farms next: *Draki* is Fijian for "weather".
